Orrin Fieldworks: Series A investor presentation

CONFIDENTIAL: shared under NDA with Meridian Capital Ventures. Do not distribute, forward or disclose any figures in this document.

October 2026. Figures are as of September 30, 2026 unless a slide says otherwise. Company measurements, estimates and projections are marked as such.

1. Orrin Fieldworks at a glance

- Autonomous strawberry-picking robots, rented to growers by the season (Robots-as-a-Service).
- Orrin Fieldworks, Inc.: a Delaware corporation headquartered in Salinas, California, founded in September 2021.
- **38 employees**, 22 in engineering; field teams in California and Florida; assembly in Guadalajara, Mexico.
- **14 pilot farms** to date; **75 paid robot-seasons** in 2026; a fleet of **64 robots**.
- **Annual recurring revenue: $3.2M** (company definition, slide 10); FY2025 revenue **$1.9M**.
- Raising **$18M Series A at a $72M pre-money valuation** (slide 14).

2. The problem

Strawberry growers in California and Florida lose an estimated 10-15% of marketable fruit each season because they cannot hire enough pickers at peak harvest. Harvest labor is the largest single cost line for most growers.

- Strawberries are picked by hand every three to four days through a season of up to seven months; a picker covers roughly a quarter of an acre a day (company estimate).
- Growers tell us their crews are smaller and older each year, while wages and worker housing keep getting more expensive (grower interviews, 2025).
- Fruit left unpicked rots on the plant and spreads mold to the next pass, so a short crew costs more than the berries it leaves behind.
- Harvest aids such as carts and conveyors make pickers faster, but still need a full crew.

3. Our product: the Orrin Picker

- An autonomous, track-mounted robot that drives the furrows at night and day, finds ripe berries with stereo cameras and a ripeness model, and picks them with a soft three-finger gripper.
- Pick rate: **94% of ripe fruit** on the rows tested in our 2025 pilots (company measurement; definition on slide 4).
- Throughput: one robot covers roughly 1.5 acres per 24 hours.
- Two picking arms place berries straight into the grower's retail clamshells on board, so fruit is handled once.
- Runs about 20 hours a day on swappable battery packs; one field technician supervises up to 8 robots, on site or remotely.
- Sold as Robots-as-a-Service: growers pay per robot per season; we own, maintain and insure the fleet.
- Current model: Orrin Picker v3, released to the field in March 2026. The v4, designed for lower cost, is planned for the 2027 season.

4. Technology and field performance

Metric (2025 pilots, company measurement)	Result
Pick rate: ripe berries picked / ripe berries detected	94%
Rows tested	212 rows at 9 of the 14 pilot farms
Berries bruised or punctured in picking	3.8%
Unripe berries picked by mistake	2.1%
Picking speed	5.6 seconds a berry, per arm
Uptime in scheduled hours	86%
Average time between operator interventions	3.4 hours

- Perception: two stereo camera pairs per arm, with LED lighting for night work. The ripeness model was trained on 1.9 million labelled berry images from the Calder University lab and our pilots.
- Gripper: three silicone fingers with slip sensing; the stem is cut, not pulled.
- Navigation: furrow following without GPS, so robots keep working in coastal fog and at night.

Definitions: "ripe berries detected" are the berries the vision system classified as ripe. Test rows were chosen by Orrin's field team; rows under plastic tunnels, with standing water or on slopes over 4% were excluded.

5. Patents and licensed technology

Application	Subject	Filed	Status	Owner
US 17/902,118	Soft gripper with slip sensing	2022-09-02	Published 2024-03; every claim rejected in a first office action; response filed 2026-05	Orrin Fieldworks, Inc.
US 18/655,430	Night-time stereo detection of hidden fruit	2024-05-06	Published 2025-11; awaiting examination	Orrin Fieldworks, Inc.
PCT/US2025/027761	Furrow-following track platform	2025-04-29	National phase entries (Europe, Mexico, Australia) due 2026-10-30; not yet decided	Orrin Fieldworks, Inc.
US 19/204,876	Gripper v4 compliant fingers	2026-07-08	Unpublished	Orrin Fieldworks, Inc.
US 63/811,204 (provisional)	Fleet scheduling across growers	2026-04-17	Unpublished; must be converted by 2027-04-17	Orrin Fieldworks, Inc.

Licensed from Calder University, exclusively for agricultural harvesting, since 2022-01-20:

- Two patent families from Dr. Castellano's university work: the stereo ripeness model (Calder docket **CU-2017-031**, US patent granted 2020) and berry-stem localization (Calder docket **CU-2019-114**, US patent granted 2022).
- Royalty: **2.5% of net robot revenue**, with a minimum of $40,000 a year. The license becomes non-exclusive if fewer than 100 robots are in commercial service on 2027-12-31.
- Dr. Castellano is a named inventor on 11 patent filings made at Calder University; all of them are assigned to the university.

6. Customers and pilots

- **14 pilot farms** across California (Salinas, Watsonville, Santa Maria) and Florida (Plant City) since 2024.
- **2 paid seasonal deployments** converted from pilots in 2025; 5 paying growers in 2026.
- Pilot customers include **Marisol Ridge Farms** and the **Pajaro Bluff Growers Cooperative** (names confidential).

Grower	Region	First pilot	2025	2026	2027 season
Marisol Ridge Farms	Watsonville, CA	2024	Paid: 18 robots	Paid: 24 robots	Contracted: 40 robots
Pajaro Bluff Growers Cooperative	Pajaro Valley, CA	2025	Pilot: 4 robots	Paid: 16 robots	Contracted: 30 robots
Grower B (name withheld)	Santa Maria, CA	2024	Paid: 22 robots	Paid: 14 robots	Contracted: 20 robots
Grower C (name withheld)	Salinas, CA	2025	Pilot	Paid: 10 robots	Contracted: 20 robots
Grower D (name withheld)	Plant City, FL	2024-25 season	Pilot	Paid: 11 robots (2025-26 season)	In discussion
Grower E (name withheld)	Plant City, FL	2024-25 season	Pilot	Ended its pilot (fruit bruising)	None
8 other pilot farms	California	2025	Pilot	Pilot	2 letters of intent: 50 robots

- 2026: **75 paid robot-seasons**, 53% of them with the two named customers.
- Our COO ran harvest operations at Marisol Ridge Farms from 2014 to 2021.

7. Market size (company estimates)

- **$42B** global fresh-produce harvesting labor market.
- **$3.1B** serviceable market: US strawberry and other soft-fruit harvesting.
- **$310M** obtainable by 2031: 10% of the serviceable market.
- US strawberry acreage is concentrated: the top 20 growers farm over half of California's acreage.
- Bottom-up: about 50,000 US strawberry acres need about 14,300 robots at one robot per 3.5 acres. At the 2027 list price of $16,500 a robot-season that is about $236M a year from strawberries alone, before raspberries, blackberries and blueberries.
- Adoption assumed in our plan: 2% of US strawberry acreage by 2028 and 15% by 2031.

CONFIDENTIAL

8. Competition (as we see it)

- We are **the only autonomous strawberry picker with a pick rate above 90%** in open-field conditions.

Approach	Open-field strawberries	Who picks	Pick rate	Business model
Orrin Picker	Yes, day and night	The robot	94% (2025 pilots)	Robots-as-a-Service, per robot-season
Greenhouse and tabletop robots	No: raised tabletop beds only	The robot	Not comparable	Equipment sale or service
Picker-assist platforms	Yes	People, riding a moving platform	Same as a hand crew	Equipment sale or lease
Early-stage research robots	Field trials only	The robot	Below 80% in published trials (our review)	Not yet sold

- Why we win: night picking doubles the hours each robot works; the soft gripper keeps bruising close to hand-picking; Robots-as-a-Service means no capital outlay for the grower; our COO's grower relationships open doors.
- What we watch: well-funded greenhouse robot companies moving into open fields, and equipment makers adding picking arms to harvest-aid platforms.

9. Business model and unit economics

- Growers rent robots by the season: about 7 months, April to October in California and December to March in Florida. Orrin Fleet Services LLC owns, maintains and insures the fleet.
- Price: **$9,500 per robot per season** on 2025 and 2026 contracts. The 2027 list price for new contracts is $16,500; 2027 renewals average $12,700.
- Robot unit cost: **$48,000** (current v3 build; target **$31,000** at 500 units with the v4 design).

Per robot-season, 2026 to date (company)	Amount	Share of price
Price	$9,500	100%
Field service and remote supervision	($3,100)	33%
Transport, insurance and consumables	($2,500)	26%
Gross profit	$3,900	41%

- Gross margin: **41%** in 2026 year to date, rising to 60%+ at scale (company projection). Fleet depreciation, straight-line over 4 seasons, is reported in operating expenses, not in gross margin.
- Payback per robot: 2.1 seasons (at the $31,000 target unit cost, the 2027 list price and a target service cost of $1,750 a robot-season).

10. Financials: history and projections

$M, years to December 31	FY2023	FY2024	FY2025	FY2026E	FY2027P	FY2028P
Robots-as-a-Service	0.00	0.00	0.38	0.71	4.6	12.9
Paid pilots	0.03	0.12	0.27	0.34	0.4	0.3
Engineering services (Tallis)	0.00	0.20	0.95	1.20	0.6	0.0
Grants (USDA SBIR)	0.07	0.08	0.30	0.35	0.0	0.0
Revenue	0.1	0.4	1.9	2.6	5.6	13.2
Cost of revenue	0.1	0.1	0.9	1.1	2.7	5.2
Operating expenses	2.6	4.3	6.2	6.9	10.8	14.9
Net loss	(2.6)	(4.0)	(5.2)	(5.4)	(7.9)	(6.9)
Gross margin, Robots-as-a-Service	n/a	n/a	22%	41%	52%	61%

- **Annual recurring revenue: $3.2M** as of September 2026. Our ARR adds contracted 2027-season robot-seasons ($1.4M), the Tallis engineering-services agreement at its annual rate ($1.2M; it ends 2027-06-30) and signed letters of intent ($0.6M).
- FY2025 revenue: **$1.9M**, up from $0.4M in FY2024.
- Cash: **$3.7M** on 2026-09-30. Monthly net burn: **$410,000**; runway: **9 months** at current burn.
- Equipment facility: $2.5M from Kestrel Equipment Finance to Orrin Fleet Services LLC, **$1.6M drawn**; 11.5% interest; secured on the fleet; we must hold at least $1.5M of unrestricted cash at all times.

11. Team

Person	Role	Education	Career
Dr. Imani Castellano	CEO and co-founder; board chair	PhD Robotics (2016) and MS Mechanical Engineering (2012), Calder University; BS Electrical Engineering, Ridgemont State University (2010)	Controls engineer, Tallis Agricultural Machinery (2010-2011); research scientist, then lead of perception, Calder University Field Robotics Lab (2016-2021); named inventor on 11 patent filings
Teodor Vashti	COO and co-founder; director	BS Agricultural Business, Linden Valley College (2006)	Harvest supervisor, then field operations manager, Seabright Produce Partners (2006-2014); director of harvest operations, Marisol Ridge Farms (2014-2021): 15 years running harvest operations for large berry growers
Dr. Mei Hollander	VP Engineering, since 2024-02	PhD Mechanical Engineering, Brightwater State University (2013)	Manipulation engineer, then engineering manager for grippers, Corvane Robotics (2013-2024)
Dolores Achterberg	VP Sales and Customer Success, since 2025-06	BA Economics, Ridgemont State University (2004)	Territory manager, then regional sales director (West), Verdant Crop Sciences (2005-2025)
Arturo Benedetti, CPA	Head of Finance, part-time, since 2024-09	BS Accounting, Linden Valley College (1998)	Fractional CFO at Ledgerline Partners (2016 to today)

- Co-founder and CTO Dr. Soren Abernathy left in August 2023; the CTO role has been open since. He keeps 720,000 vested common shares.
- Board: Dr. Castellano, Mr. Vashti and Hollis Arvidsson (Partner, Granary Ventures). Tallis Agricultural Machinery has an observer seat; the independent seat is vacant.
- **38 employees**: 22 in engineering, 9 in field operations, 4 in sales, 3 in finance and administration; 7 of them work for our Mexican subsidiary.

CONFIDENTIAL

12. Company structure and legal entities

Entity	Jurisdiction	Formed	Role	Ownership
Orrin Fieldworks, Inc.	Delaware, US; headquarters in Salinas, California	2021-09-14	Parent and Series A issuer; employs the US staff; holds our patent applications and the Calder University license	Shareholders (slide 14)
Orrin Fleet Services LLC	California, US	2023-11-02	Owns the robot fleet; signs grower contracts; borrower under the Kestrel equipment facility	100% Orrin Fieldworks, Inc.
Orrin Fieldworks Mexico, S. de R.L. de C.V.	Jalisco, Mexico (Guadalajara)	2024-07-19	Gripper and wiring-harness assembly; 7 staff	99% Orrin Fieldworks, Inc.; 1% Orrin Fleet Services LLC

Related parties:

- Vashti Harvest Services LLC (California), wholly owned by our COO, Teodor Vashti, moves robots between farms and supervises night shifts for us: **$310,000** paid in 2025 and 2026 to date, under a contract the board approved.
- Tallis Agricultural Machinery is a 2025 noteholder ($2.5M), our engineering-services customer ($1.2M a year), the quoted contract manufacturer for v4 robots and a board observer. It has committed $1.0M to this round.
- Calder University, Dr. Castellano's former employer and our licensor, holds no equity.

13. Timeline

Date	Event
2019-05	First strawberry-picking trials at Calder University's Field Robotics Lab, a university project led by Dr. Castellano and Dr. Abernathy.
2021-09-14	Orrin Fieldworks, Inc. incorporated in Delaware by Dr. Castellano, Mr. Vashti and Dr. Abernathy.
2022-01-20	Exclusive license from Calder University to two patent families, for agricultural harvesting.
2022-04	Pre-seed: $2.5M in SAFEs, led by Furrowline Angels.
2023-03-08	Series Seed: $11.0M led by Granary Ventures; the SAFEs convert.
2023-08-31	Co-founder and CTO Dr. Abernathy leaves.
2024-04	First pilots with the Picker v2: 4 farms in Salinas and Watsonville, 12 robots.
2024-09	USDA SBIR Phase II grant: $650,000 over 2024-2026.
2024-12	First Florida pilots, at 2 farms in Plant City.
2025-02-10	**$7.0M convertible notes**: Granary Ventures $3.5M, Tallis Agricultural Machinery $2.5M, others $1.0M.
2025-03	Engineering-services agreement with Tallis: $1.2M a year to 2027-06-30.
2025-06-16	$2.5M equipment facility with Kestrel Equipment Finance.
2025 season	14 pilot farms; the first 2 paid seasonal deployments.
2026-03	Orrin Picker v3 released to the field.
2026-06	Grower E in Plant City ends its pilot.
2026-10	Series A opens; target close 2026-12-15.
2027-04	2027 California season: 360 robots planned.
2027-12-31	Calder license test: 100 robots in commercial service, or the license becomes non-exclusive.

14. Capitalization and Series A terms

- Raising **$18M Series A at a $72M pre-money valuation**.

Holder	Class	Shares today	% today	Shares after the round	% after
Dr. Imani Castellano	Common	3,480,000	29.0%	3,480,000	18.2%
Teodor Vashti	Common	2,160,000	18.0%	2,160,000	11.3%
Dr. Soren Abernathy (former co-founder)	Common	720,000	6.0%	720,000	3.8%
Granary Ventures	Series Seed Preferred	1,800,000	15.0%	1,800,000	9.4%
Furrowline Angels and other seed investors	Series Seed Preferred	1,200,000	10.0%	1,200,000	6.3%
2025 noteholders, on conversion	Series A-1 Preferred	none	none	2,061,303	10.8%
New Series A investors	Series A Preferred	none	none	3,818,008	20.0%
Options granted	Common, under option	1,560,000	13.0%	1,560,000	8.2%
Unallocated option pool	Common, reserved	1,080,000	9.0%	2,290,805	12.0%
Fully diluted total		12,000,000	100%	19,090,116	100%

- Security: Series A Preferred Stock. The pre-money valuation is fully diluted and includes the conversion of the 2025 notes and an increase of the unallocated option pool to 12% of the post-money capitalization.
- Price: about **$4.7145 a share**. The 2025 notes, about **$7.77M** with interest at closing, convert at 80% of that price into Series A-1 Preferred.
- Liquidation preference: 1x, non-participating, equal in rank across Series A, Series A-1 and Series Seed. Dividends: 8% non-cumulative, if declared. Anti-dilution: broad-based weighted average.
- Board after closing: 5 seats: 2 for common, 1 for Series Seed, 1 for Series A and 1 independent agreed by both.
- Committed: Granary Ventures $3.0M (its pro rata) and Tallis Agricultural Machinery $1.0M. We are looking for a lead for the remaining $14.0M; minimum close $12M; target close 2026-12-15.

15. Use of funds, milestones, risks and the ask

- Use of funds: build 300 robots for the 2027 season (55%), expand perception and gripper R&D (25%), sales and field operations (20%).
- The robot budget of **$9.9M** assumes an average unit cost of **$33,000** on the v4 design (Tallis bill-of-materials quote, August 2026).
- Milestones for the 2027 season: 360 robots in service; ARR of **$8M** on the same definition; a pick rate of at least 95% at 3 farms; unit cost below $36,000. Series B planned for 2028.

Key risks (as we see them):

- Weather and field variability affect pick rates.
- Hardware reliability at fleet scale.
- Grower adoption cycles are tied to the season calendar.
- The Calder license becomes non-exclusive if fewer than 100 robots are in commercial service at the end of 2027.

The ask: we invite Meridian Capital Ventures to lead the round with **$12M** and take the Series A board seat. Data room access on request.

CONFIDENTIAL
