Vantelle Diagnostics: Series B investor presentation

Confidential: prepared for Meridian Capital Ventures. Do not distribute.

October 2026. Figures are as of September 30, 2026 unless a slide says otherwise. Company data, estimates and projections are marked as such.

1. Vantelle Diagnostics at a glance

- Handheld blood testing for clinics without a laboratory: a five-test cardiac and metabolic panel from a finger stick in 12 minutes.
- Vantelle Diagnostics, Inc.: a Delaware corporation headquartered in Albuquerque, New Mexico, founded in March 2018, with cartridge production in Tempe, Arizona.
- **64 employees**; **41 clinics** in a paid evaluation program in Texas, Arizona and New Mexico.
- FDA 510(k) submitted for the first two assays in Q2 2026; clearance expected in Q1 2027 (company estimate).
- FY2025 revenue **$2.6M**. Raising a **$30M Series B at a $140M pre-money valuation** (slides 14 and 15).

2. The problem

Urgent-care clinics and rural hospitals without an on-site laboratory send cardiac and metabolic blood tests to reference labs and wait 1-3 days for results. Patients with chest pain or uncontrolled diabetes are often transferred, or sent home, before results arrive.

- A transfer for a suspected heart attack that turns out negative costs thousands of dollars and takes a rural ambulance out of service for hours (company estimate).
- Benchtop analyzers that could run these tests on site need venous blood, a trained operator and daily quality control, which small clinics can't staff.
- The clinics we surveyed send out a median of 14 cardiac or metabolic panels a day (company survey of 52 clinics, 2024).

3. Our product: the Vantelle Q5

- A handheld, cartridge-based analyzer that runs a five-test cardiac and metabolic panel from a finger-stick sample in **12 minutes**.
- The panel: high-sensitivity troponin I, NT-proBNP, HbA1c, creatinine (with eGFR) and potassium.
- One 40-microliter drop of blood. Each cartridge holds all its reagents and an on-board calibrator, so there is no separate calibration step.
- The analyzer weighs 640 grams, runs on a battery and sends results to the clinic's electronic health record over Wi-Fi (HL7 and FHIR).
- Razor-and-blade model: instruments placed at or near cost; recurring revenue from single-use cartridges.
- Cartridges keep for 9 months at room temperature (our stability data so far covers 6 months).

CONFIDENTIAL

4. Clinical performance

- Lab-grade accuracy: **98.7% agreement** with central-lab results in our internal study of 640 samples (company data).

Assay	Results compared	Agreement with the central lab	Imprecision (CV) at the decision level
High-sensitivity troponin I	128	96.1%	11.8% at the 99th-percentile cutoff
NT-proBNP	127	98.4%	7.2%
HbA1c	128	99.2%	2.9%
Creatinine	126	100%	4.1%
Potassium	125	100%	2.4%
All five assays	634 of 640	98.7%	

- Study design: 128 patients at one urgent-care site, September to December 2025. Venous blood samples were run on our analyzer by Vantelle staff and compared with the site's reference laboratory. Six results were left out for insufficient sample or a cartridge error.
- "Agreement" means the result fell in the same clinical category (normal or abnormal) as the central-lab result.
- Pivotal study for the remaining assays and the CLIA waiver: 4 sites, finger-stick samples run by clinic staff, about 1,150 patients; enrolling since July 2026, results expected in Q2 2027.

CONFIDENTIAL

5. Regulatory status

- FDA 510(k) submission for the first two assays filed in Q2 2026.
- Clearance expected in Q1 2027 (company estimate).

Step	Date	Status
510(k) for troponin I and HbA1c, submission **K261734**	Filed 2026-05-18	The FDA asked for additional information on 2026-08-21. Our answer is due within 180 days; we plan to send it in December 2026.
510(k) for NT-proBNP, creatinine and potassium	Planned for Q2 2027	Needs the pivotal study
CLIA waiver, so that staff without laboratory training may run the tests	Planned for Q3 2027	Until it is granted, a site needs a CLIA certificate for moderate-complexity testing and qualified testing staff
ISO 13485 quality-system certification	Audit booked for Q1 2027	Not yet certified
CE marking for the EU	Not before 2028	Through Vantelle Diagnostics Ireland Limited

- Evaluation-program analyzers are labelled for investigational use only. Sites run them alongside their reference laboratory, and the results are not used for patient care until clearance.

6. Patents

Family	Subject	Application	Status	Owner
VD-1	Capillary-fill cartridge with on-board calibrator	US 16/884,327, filed 2020-05-28; a European application	US patent granted 2023-03; Europe pending	Vantelle Diagnostics, Inc.
VD-2	Five-assay optical reader with drift correction	US 17/662,019, filed 2022-05-04	Published 2023-11; final rejection 2026-07; an appeal is under consideration	Vantelle Diagnostics, Inc.
VD-3	Finger-stick sample-volume check	**US 19/318,770**, filed 2025-09-30	Unpublished	Vantelle Diagnostics, Inc.
VD-4	Troponin assay chemistry on dried reagents	**PCT/US2026/014022**, filed 2026-02-11	Unpublished	Vantelle Diagnostics, Inc.
CM-1	Cartridge sealing film and reagent blister	US 15/707,915, filed 2017-09-18	US patent granted 2021-01	Corvia Microfluidics LLC (60% Vantelle), licensed exclusively to Vantelle

- Freedom to operate: outside counsel's 2024 opinion found no blocking patents for the cartridge; it did not cover the troponin chemistry in VD-4.
- Vantelle pays Corvia a royalty of 3% of cartridge net sales under the CM-1 license.

CONFIDENTIAL

7. Traction

- **41 clinics** enrolled in a paid evaluation program across Texas, Arizona and New Mexico (19, 14 and 8 sites).
- Evaluation customers include **Mesa Verde Urgent Care** and **Rio Bravo Community Hospital** (names confidential).
- Cartridge reorder rate of **92%** among evaluation sites.

Customer	State	Sites	In the program since	Analyzers	Cartridges a month, 2026 average
Mesa Verde Urgent Care	Arizona and New Mexico	12	2024-03	18	610
Rio Bravo Community Hospital	Texas	1	2024-09	3	140
17 independent urgent-care operators	Texas, Arizona and New Mexico	28	2024 to 2026	34	930
Total		41		55	1,680

- Reorder rate: 34 of the 37 sites that have been in the program for at least 90 days placed a second cartridge order within 90 days of their first.
- Since March 2024 we have shipped **27,600 cartridges**.
- Evaluation sites pay **$650 a month per analyzer** and buy their cartridges.
- Southwest Clinical Supply, a regional distributor, signed a non-binding letter of intent to stock our analyzers for 300 sites after clearance.

8. Market and competition

- **$18B** global point-of-care diagnostics market; **$2.4B** serviceable market in US urgent care and rural hospitals.
- How we size the serviceable market: about 13,200 sites (11,400 urgent-care centers and 1,800 rural hospitals) x 2 analyzers x 8 panels a day x 300 days x $38 a cartridge.
- Incumbent point-of-care analyzers need venous blood and trained staff; ours runs from a finger stick and needs neither.

	Vantelle Q5	**Benchtop point-of-care analyzers**	**Single-test handheld readers**	**Reference laboratory**
Sample	Finger stick	Venous blood	Finger stick or venous blood	Venous blood
Tests per run	5	1 to 10	1	Any
Time to result	12 minutes	10 to 20 minutes	5 to 15 minutes	1 to 3 days
Who runs it	Clinic staff (after the CLIA waiver)	Trained laboratory staff	Clinic staff	The laboratory
Cost to the clinic	$2,900 analyzer; $38 a cartridge	$15,000 to $40,000 analyzer	Reader under $1,000	Per test

CONFIDENTIAL

9. Business model and unit economics

- Analyzer: list price $2,900 against a build cost of $3,350, so we place analyzers at or near cost; 60% of evaluation sites received theirs free.
- Cartridge: list price $38; average realized price $33.40 in 2026; cost **$16.20** at today's volumes, with a target of **$7.50** at 2 million cartridges a year (2029).

Per cartridge	2026	2029 target
Average price	$33.40	$31.00
Cost	$16.20	$7.50
Gross margin	51%	76%

- After clearance, clinics bill payers for each panel under existing test codes; we sell cartridges to the clinic and do not bill payers ourselves.
- Our model assumes 8 panels a day per analyzer from 2028; evaluation sites used an average of 41 cartridges per site a month in 2026.

CONFIDENTIAL

10. Financials

	FY2024	FY2025	FY2026E	FY2027P	FY2028P	FY2029P
Revenue ($M)	1.1	2.6	5.9	16.8	41.0	78.5
Gross margin	49%	58%	61%	63%	67%	71%
Net loss ($M)	(9.8)	(12.4)	(14.0)	(16.5)	(6.0)	9.0 profit
Cash at year end ($M)	21.0	11.3	—			

- Revenue mix, FY2025: evaluation program $1.1M; research-use cartridges sold to clinical research organizations $0.8M; contract development for a diagnostics partner (name confidential) $0.7M.
- 2026 to date (January to September): revenue **$2.7M**. FY2026E includes a **$2.4M** opening stocking order from Southwest Clinical Supply, which ships on 510(k) clearance.
- Cash: **$6.9M** on 2026-09-30, after **$6.0M** of bridge notes from existing investors in June 2026. Net burn: **$1.15M** a month.
- Debt: a $5.0M term loan from Bluestem Venture Lending (2024-03), interest-only until 2027-03, then 30 monthly payments.

CONFIDENTIAL

11. Team

Person	Role	Education	Career
Dr. Wren Albescu	CEO and co-founder; director	MD, Larkfield University School of Medicine (2008); BS Biochemistry, Ashcombe Institute of Technology (2004)	Emergency physician, St. Brennan Regional Medical Center, Tucson (2011-2017); medical director, Quillon Diagnostics (2017-2018)
Dr. Tomasz Lindqvist	CTO and co-founder; director	PhD Bioengineering, Ashcombe Institute of Technology (2012)	Senior scientist in microfluidics, Pellucid Biosystems (2012-2016); founder of Corvia Microfluidics (2016), whose sealing patent our cartridges use
Grace Oyelaran, RAC	VP Regulatory and Quality, since 2025-11	MS Regulatory Science, Larkfield University (2008)	Regulatory affairs manager, then director, Meridale Medical (2009-2025); led 14 FDA 510(k) clearances
Luis Arrellano	VP Commercial, since 2024-01	BA Communications, Larkfield University (2003)	Sales representative, then regional vice president (Southwest), Tavora Health Systems (2006-2023)
Darnell Whitcombe, CPA	Interim CFO, part-time, since 2026-03	BS Accounting, Larkfield University (1999)	Partner, Whitcombe Advisory, fractional finance (2014 to today)

- Our previous VP Regulatory left in September 2025, while the 510(k) was being prepared; our previous CFO left in February 2026.
- Board: Dr. Albescu, Dr. Lindqvist, Celeste Moreau (Partner, Ardent Peak Ventures) and Owen Pakula (Partner, Juniper Rock Capital). The independent seat is vacant.
- **64 employees**: 22 in R&D, 18 in manufacturing, 9 in clinical and regulatory, 9 in sales and support, 6 in finance and administration.

12. Company structure and legal entities

Entity	Jurisdiction	Formed	Role	Ownership
Vantelle Diagnostics, Inc.	Delaware, US; headquarters in Albuquerque, New Mexico	2018-03-12	Parent and Series B issuer; the FDA submitter; owns patent families VD-1 to VD-4	Shareholders (slide 14)
Vantelle Cartridge Manufacturing LLC	Arizona, US (Tempe)	2022-05-09	Cartridge pilot line with 18 staff; leases the Tempe plant	100% Vantelle Diagnostics, Inc.
Corvia Microfluidics LLC	Texas, US (Austin)	2016-02-01; 60% acquired 2021-04	Owns the CM-1 patent, licensed exclusively to Vantelle	60% Vantelle Diagnostics, Inc.; 40% Corvia's founders, including Dr. Lindqvist with 22%
Vantelle Diagnostics Ireland Limited	Ireland (Dublin)	2025-01-15	Our future EU regulatory entity; no staff	100% Vantelle Diagnostics, Inc.

- If Vantelle is acquired, Corvia's minority members may sell their 40% to Vantelle at fair market value.
- Related party: Dr. Lindqvist, our CTO, holds 22% of Corvia directly and so shares in the royalty Vantelle pays Corvia (3% of cartridge net sales).

CONFIDENTIAL

13. Timeline

Date	Event
2016-02	Dr. Lindqvist founds Corvia Microfluidics in Austin.
2018-03-12	Vantelle Diagnostics, Inc. incorporated in Delaware by Dr. Albescu and Dr. Lindqvist.
2019-06	Seed round: $4.5M led by Juniper Rock Capital.
2021-04	Vantelle acquires 60% of Corvia Microfluidics for stock.
2022-02	Series A first close: $24.0M led by Ardent Peak Ventures.
2022-05	The cartridge pilot line opens in Tempe.
2023-11	Series A second close: $12.0M from existing investors.
2024-03	$5.0M term loan from Bluestem Venture Lending; the paid evaluation program starts with 9 clinics.
2025-09	Our VP Regulatory leaves; a successor joins in November.
2025-09 to 2025-12	Internal agreement study: 640 samples from 128 patients.
2026-02	Our CFO leaves; an interim CFO starts in March.
2026-05-18	510(k) submitted for troponin I and HbA1c.
2026-06-30	$6.0M of bridge notes from existing investors.
2026-07	The pivotal multi-site study begins enrolling.
2026-08-21	The FDA asks for additional information on the 510(k).
2026-10	Series B opens; target close 2027-01-29.
Q1 2027	510(k) clearance expected (company estimate).
Q3 2027	CLIA waiver application planned.

CONFIDENTIAL

14. Capitalization and Series B terms

Holder	Class	Shares today	% today	Shares after the round	% after
Dr. Wren Albescu	Common	6,400,000	17.6%	6,400,000	12.3%
Dr. Tomasz Lindqvist	Common	4,800,000	13.2%	4,800,000	9.2%
Juniper Rock Capital and other seed investors	Series Seed Preferred	6,000,000	16.5%	6,000,000	11.5%
Ardent Peak Ventures and other Series A investors	Series A Preferred	12,400,000	34.1%	12,400,000	23.8%
Bluestem Venture Lending	Warrants for common, at $2.903	400,000	1.1%	400,000	0.8%
2026 bridge noteholders, on conversion	Series B-1 Preferred	none	none	2,571,392	4.9%
New Series B investors	Series B Preferred	none	none	9,212,627	17.6%
Options granted	Common, under option	5,200,000	14.3%	5,200,000	10.0%
Unallocated option pool	Common, reserved	1,200,000	3.3%	5,220,489	10.0%
Fully diluted total		36,400,000	100%	52,204,508	100%

- The pre-money valuation is fully diluted and includes the conversion of the 2026 bridge notes and an increase of the unallocated option pool to 10% of the post-money capitalization.
- Price: about **$3.2564 a share**. The bridge notes, $6.0M plus 8% interest, convert at 75% of that price into Series B-1 Preferred.
- Liquidation preference: Series B and B-1 1x, non-participating, senior to Series A and Series Seed. Series A: 1x, participating, from the 2022 round. Series Seed: 1x, non-participating.
- Anti-dilution: broad-based weighted average. Board after closing: 6 seats: 2 for common, 1 each for Series Seed, Series A and Series B, and 1 independent.

15. The raise and the ask

- Raising a **$30M Series B at a $140M pre-money valuation**; existing investors committing $8M.
- The $8M: Ardent Peak Ventures $5.0M and Juniper Rock Capital $3.0M. We are looking for $22M from new investors.
- Use of funds: complete FDA clearance (35%), scale cartridge manufacturing (40%), commercial launch (25%).
- Milestones: 510(k) clearance for troponin I and HbA1c in Q1 2027; CLIA waiver submitted in Q3 2027; 300 commercial sites by the end of 2027; cartridge cost below $10 at 1 million cartridges a year.

Key risks (as we see them):

- FDA timing for the first clearance and the CLIA waiver.
- Scaling cartridge production from the pilot line.
- Payer coverage for point-of-care panels.

The ask: we invite Meridian Capital Ventures to lead the round with **$15M** and join our board.
